No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (Operations Staff, P.O. Box 765, Schenectady, New York 12301) for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

CONTENTS OF VOLUME 86

NUMBER 1, MAY 1978

CHRISTIAN STAHLI, JOHN H. WHARTON, AND HANS NOLL. A Computer-Controlled Multichannel Micropipetter	1
J. S. BAUMSTARK, C. T. LEE, AND R. J. LUBY. Radial Immunodiffusion Quantitation of Proteins by an Antibody Overlay Technique	21
ANNE M. MCCORMICK, JOSEPH L. NAPOLI, AND HECTOR F. DELUCA. High-Pressure Liquid Chromatographic Resolution of Vitamin A Compounds	25
JOHN R. CANN, DONALD I. STIMPSON, AND DAVID J. COX. Isoelectric Focusing of Interacting Systems. III. Carrier Ampholyte-Induced Macromolecular Association or Dissociation into Subunits	34
J. EDWARD PUZAS AND DAVID B. P. GOODMAN. A Rapid Assay for Cellular Deoxyribonucleic Acid	50
JÖRN ULLRICH BECKER. A Method for Glycogen Determination in Whole Yeast Cells	56
BOHDAN BAKAY, ERKKI NISSINEN, AND LAWRENCE SWEETMAN. Analysis of Radioactive and Nonradioactive Purine Bases, Nucleosides, and Nucleotides by High-Speed Chromatography on a Single Column	65
JAMES J. KOZIARZ, HEINZ KÖHLER, AND THEODORE L. STECK. A System for Preparative Polyacrylamide Gel Electrophoresis in Sodium Dodecyl Sulfate	78
E.-G. AFTING AND J. S. ELCE. DNA in the Rat Uterus Myometrium during Pregnancy and Postpartum Involution. Measurement of DNA in Small Pieces of Mammalian Tissue	90
ISAO KARUBE, YOSHIO ISHIMORI, AND SHUICHI SUZUKI. Photocontrol of Affinity Chromatography. I. Trypsin Purification by Photosensitive Soybean Trypsin Inhibitor (STI) Gel	100
JOHN M. RAWLS, JR. Enzymatic Synthesis of [6- ¹⁴ C]Orotidine 5'-Monophosphate and Its Use in the Assay of Orotate Phosphoribosyltransferase and Orotidylate Decarboxylase	107
JOSEPH M. KORNFELD. A New Colorimetric Method for the Determination of 6-Aminopenicillanic Acid	118
BRENT R. LARSEN, E. P. LAZZARI, AND D. M. DESIDERIO. Products from the Reaction of Ninhydrin with Triphenylalanine	127
MAGNUS AXELSON. Exchange of Oxime Functions: A Useful Reaction in GC-MS Analysis of Steroids	133
THOMAS SPECTOR. Refinement of the Coomassie Blue Method of Protein Quantitation. A Simple and Linear Spectrophotometric Assay for ≤ 0.5 to $50 \mu\text{g}$ of Protein	142
DIETRICH O. R. KEPPLER AND WERNER KAISER. Enzymatic Analysis of Guanine Nucleotides in Tissues and Cells	147
J. BERNDT, B. MESSNER, T. TURKKI, AND E. WEISSMANN. Optical Assay of Pyruvate Carboxylase in Crude Liver Homogenates	154
KENJI KATAGIRI, TOSHIHIKO TAKEUCHI, KEIKO TANIGUCHI, AND MAKOTO SASAKI. One Step Purification Procedure of Elastase from Pancreatic Powder by Affinity Chromatography	159
MOHAMMED KALIMI. The Activated Hepatic Glucocorticoid-Receptor Complex: A Simple One-Step Method for Its Separation from Nonactivated Complex	166
YUN-CHI YEH. A Simple and Sensitive Assay Procedure for Ribonucleotide Reductase System	175

RONALD SWANSTROM AND PETER R. SHANK. X-Ray Intensifying Screens Greatly Enhance the Detection by Autoradiography of the Radioactive Isotopes ^{32}P and ^{125}I	184
S. TSUYOSHI OHNISHI AND JAMES K. BARR. A Simplified Method of Quantitating Protein Using the Biuret and Phenol Reagents	193
S. TSUYOSHI OHNISHI. A New Method of Separating Inorganic Orthophosphate from Phosphoric Esters and Anhydrides by an Immobilized Catalyst Column	201
DENNIS J. O'KANE, ROBERT G. LEVENSON, AND RAYMOND F. JONES. A Rapid and Sensitive Method for the Detection of Histone Peptides	214
J. BRAD MURPHY AND C. A. STUTTE. Analysis for Substituted Benzoic and Cinnamic Acids Using High-Pressure Liquid Chromatography	220
MICHELE G. BRUNETTE, NORMAND VIGNEAULT, AND GABY DANAN. A New Fluorometric Method for Determination of Picomoles of Inorganic Phosphorus. Application to the Renal Tubular Fluid	229
L. BOCK, W. BUTTE, M. RICHTER, AND J. K. SEYDEL. A Simple and Rapid Thin-Layer Chromatography Method to Follow the Kinetics of Product Formation by 7,8-Dihydro-6-hydroxymethylpterin pyrophosphokinase and 7,8-Dihydropteroate Synthetase	238
RICHARD GUY SMITH AND SIN A. LEE. Large-Scale Isolation and Partial Purification of Type C RNA Viruses on Hydroxyapatite. 1. Biochemical Characterization	252
R. L. BURKE, P. J. ANDERSON, AND W. R. BAUER. Resolution of Single- and Double-Stranded RNAs in Buoyant Cesium Trichloroacetate	264
MITSURU UCHIYAMA AND MIDORI MIHARA. Determination of Malonaldehyde Precursor in Tissues by Thiobarbituric Acid Test	271
JOHN G. LEINEN AND JAMES L. WITTLIFF. Determination of Radioactivity in Polyacrylamide Gel Slices Mounted on Solid Supports	279
LAURENCE R. MEYERSON, KENNETH D. McMURTREY, AND VIRGINIA E. DAVIS. A Rapid and Sensitive Potentiometric Assay for Monoamine Oxidase Using an Ammonia-Selective Electrode	287
FRANK JORDAN, DONALD J. KUO, AND ERNST U. MONSE. A pH-Rate Determination of the Activity-pH Profile of Enzymes. Application to Yeast Pyruvate Decarboxylase Demonstrating the Existence of Multiple Ionizable Groups	298
A. STEINEMANN, J. BIETENHADER, AND M. DOCKTER. An Extended Series of Fluorescent Sulfhydryl Reagents Useful in Energy Transfer Measurements	303
TAKAFUMI WATANABE, YASUO MOTOMURA, AND TETSUYA SUGA. A New Colorimetric Determination of D-Amino Acid Oxidase and Urate Oxidase Activity	310

SHORT COMMUNICATIONS

YU. I. KOZLOV, L. V. GENING, A. YA. STRONGIN, AND V. G. DEBABOV. A Simple Method for Phage or Plasmid DNA's Isolation Suitable as a "Screening Test" after Molecular Cloning	316
M. K. JOHNSON. Variable Sensitivity in the Microbiuret Assay of Protein	320
VICTORIA GORUN, IOAN PROINOV, VALERIA BĂLTESCU, GABRIELA BALABAN, AND OCTAVIAN BĂRZU. Modified Ellman Procedure for Assay of Cholinesterases in Crude Enzymatic Preparations	324
K. K. TAN. Assay of Proteins by Lowry's Method in Samples Containing 2-Mercaptoethanol	327
SHAKOOR M. KHAN AND DENNIS W. DARNALL. The Hydrolysis of 3-(2-Furylacryloyl)-glycyl-L-leucine Amide by Thermolysin	332
NORMAN G. ANDERSON. Construction of Tygon Manifolds and Connectors	337
JERRY R. WILLIAMS. A Simple, Safe Device for Acid Hydrolysis of DNA	339
JOHN W. PELLEY, CHARLES W. GARNER, AND GWYNNE H. LITTLE. A Simple	

Rapid Biuret Method for the Estimation of Protein in Samples Containing Thiols	341
--	-----

NUMBER 2, JUNE 1, 1978

ADA WEN-SHUNG MA LIN AND DONALD O. CASTELL. Evidence of the Importance of pH and Salt Concentration on Column Chromatography with Sepharose Gel Filtration in Separation of Proteins	345
TAKAFUMI WATANABE AND TETSUYA SUGA. Affinity Chromatography of Urate Oxidase on 8-Aminoxanthine-Bound Sepharose	357
LISE C. MALHOTRA, M. R. V. MURTHY, AND K. D. CHAUDHARY. Separation and Purification of Small Quantities of Specific RNA Species by Polyacrylamide Gel Electrophoresis Using Prestained RNAs as Markers	363
C. S. KIM, G. MOROSS, W. MOYER, G. KAUFMAN, R. MACCOLL, AND M. R. EDWARDS. Automated Acquisition and Analysis of Data from the Photoelectric Scanner of the Model E Analytical Ultracentrifuge	371
JOHN F. DIXON AND LOWELL E. HOKIN. A Simple Procedure for the Preparation of Highly Purified (Sodium + Potassium) Adenosinetriphosphatase from the Rectal Salt Gland of <i>Squalus acanthias</i> and the Electric Organ of <i>Electrophorus electricus</i>	378
S. L. N. RAO. A Sensitive and Specific Colorimetric Method for the Determination of α,β -Diaminopropionic Acid and the <i>Lathyrus sativus</i> Neurotoxin	386
CHRISTOPHER A. GABEL AND BENNETT M. SHAPIRO. [¹²⁵ I]Diiodofluorescein Isothiocyanate: Its Synthesis and Use as a Reagent for Labeling Proteins and Cells to High Specific Radioactivity	396
ANN TERCYAK, HUI-TSENG KUAN, LILY L. SALCEDO, AND PETER BRECHER. Continuous Measurement of ¹⁴ C-Labeled Carbon Dioxide and Lactic Acid by Cultured Cells Grown in Leighton Tubes	407

INFORMATION FOR AUTHORS

Analytical Biochemistry will publish articles of broad interest on qualitative and quantitative techniques based on chemical, physical, and biological principles; methods of preparation, purification, characterization, isolation, and separation of biological substances and related materials; and instrumentation.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted to **Analytical Biochemistry, Editorial Office, 111 Fifth Avenue, New York, N.Y. 10003.**

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least three copies should be submitted, each copy to include all figures and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and address to which proof should be mailed. Please number all pages of manuscript.

Authors are encouraged to use descriptive subheadings in this order: Abstract, Introductory statement (no heading), Methods, Results, Discussion, Acknowledgments, and References.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the *Archives of Biochemistry and Biophysics* Information for Authors, appearing in the January issues of that journal.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at bottom of page containing table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should

follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Chattoraj, D. K., and Bull, H. B. (1971) *Arch. Biochem. Biophys.* **142**, 363-370.
2. Gottschalk, A. (1960) in *The Enzymes* (Boyer, R. D., Lardy, H. A., and Myrback, K., eds.), 2nd ed., Vol. 2, pp. 461-467, Academic Press, New York.
3. Meister, A. (1957) *The Biochemistry of Amino Acids*, p. 298, Academic Press, New York.

Proofs. Galley proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge.
